### Ohio Invasive Plant Assessment Protocol

**Botanical Name:** Paulownia tomentosa  
**Common Name:** Princess Tree, Empress Tree  
**Family Name:** Paulowniaceae  
**Posted Date:** 7/20/16  
**Initial assessment conducted by:** Theresa Culley

### Step I

**Directions:** Place an “X” in the Score column next to the selected answer to each of the four questions.

<table>
<thead>
<tr>
<th>Question</th>
<th>Yes</th>
<th>No</th>
<th>Unknown</th>
<th>Notes</th>
<th>References</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. Is this plant known to occur in the state and listed as &quot;noxious&quot; on any federal or Ohio Department of Agriculture plant list?</td>
<td>Yes</td>
<td>No</td>
<td>Unknown</td>
<td>Place on invasive plant list, no further investigation needed. STOP</td>
<td>3,4,5</td>
</tr>
<tr>
<td>2. Has this plant demonstrated widespread dispersion and establishment (i.e. high numbers of individuals forming dense stands) in natural areas across two or more regions in Ohio?</td>
<td>Yes</td>
<td>No</td>
<td>Unknown</td>
<td>Place on invasive plant list, no further investigation needed. STOP</td>
<td>Reference 1: 2 regions (4 &amp; 5); Reference 2: 3 regions (3,4 &amp; 5). Note that information regarding widespread dispersion and establishment information is not included in the references.</td>
</tr>
<tr>
<td>3. Does this plant form self-replicating populations outside of cultivation in Ohio and is it documented to alter the composition, structure, or normal processes or functions of a natural ecosystem?</td>
<td>Yes</td>
<td>No</td>
<td>Unknown</td>
<td>Species is known to form self-replicating populations outside of cultivation, but its ability to alter natural ecosystems is unclear.</td>
<td>1,2</td>
</tr>
<tr>
<td>4. Is the plant listed as invasive in an adjoining state or a nearby state east of the Mississippi within the USDA Plant Hardiness zones 5-6?</td>
<td>Yes</td>
<td>No</td>
<td>Unknown</td>
<td>IN, PA [also in KY but not included here]</td>
<td>3,4,6</td>
</tr>
</tbody>
</table>

If the answer was yes for both questions 3 and 4, the plant is placed on the invasive plant list and no further research is needed. Stop here. If the answer is no for both questions 3 and 4, the plant is not considered invasive and no further investigation is warranted. Otherwise, proceed to Step II.

### Step II: Invasion Status

**Directions:** Place the appropriate numerical score (or "U") in the Score column next to the selected answer to each of these 18 questions.

#### 1. Current Invasion in Ohio
- plant is not found in natural areas (0 pts.)
- plant is found in natural areas but only because it persist from previous planting in that location (e.g. old home sites) (0 pts.)
- plant is only expanding from sites of previous planting (1 pt.)
- plant occurs in natural areas away from site of planting (3 pts.)
- Information unknown (U)

#### 2. State Distribution
- plant is not naturalized in any region of Ohio (0 pts.)
- plant is naturalized in only one region in Ohio (1 pt.)
- plant is naturalized in two regions in Ohio (2 pts.)
- plant is naturalized in three regions in Ohio (3 pts.)
- plant is naturalized in four regions in Ohio (4 pts.)
- plant is naturalized in five regions in Ohio (5 pts.)
- Information unknown (U)

#### 3. Regional/US Distribution
- plant is not considered to be a problem in any other state (0 pts.)
- plant has been reported as a widespread problem in another non-neighboring state within the USDA Plant Hardiness Zones 5-6 (1 pt.)
- plant has been reported to be a widespread problem in 1-2 adjoining states (3 pts.)
- plant has been reported to be a widespread problem in 3 or more adjoining states (5 pts.)

### Score

### Observations

1. **Vegetative Reproduction**
   - No vegetative reproduction (0 pts.)
   - Reproduces readily within the original site (1 pt.)
   - Has runners or spreading rhizomes that root easily (3 pts.)
   - Information unknown (U)

2. **Sexual Reproduction**
   - No sexual reproduction (0 pts.)
   - Infrequent sexual reproduction (1 pt.)
   - Frequent sexual reproduction, but high variation among years in seed production (3 pts.)
   - Information unknown (U)

3. **Number of Viable Seeds or Propagules per Plant**
   - Few (0-10) (1 pt.)
   - Moderate (11-1,000) (3 pts.)
   - Prolific (>1,000) (5 pts.)
   - Information unknown (U)

4. **Flowering Period**
   - One month or less per year (0 pts.)
   - Two months (1 pt.)
   - Three to five months (2 pts.)
   - Longer than five months (3 pts.)
   - Information unknown (U)

5. **Dispersal Ability**
   - Low potential for long-distance seed/propagule dispersal (>1km) (0 pts.)
   - Medium potential for long-distance seed/propagule dispersal (3 pts.)
   - High potential for long-distance seed/propagule dispersal (5 pts.)
   - Information unknown (U)

6. **Generation Time**
   - Information unknown (U)

---

**7. Flora**
- The plant has been reported to be a widespread problem in similar habitat outside the US (1 pt.)
- Information unknown (U)

**8. Vegetation (Plant Growth)**
- Can resprout easily after herbivory.

**9. Dispersal**
- Reproduces readily within the original site (1 pt.)
- Fragments can be easily dispersed (5 pts.)
- Information unknown (U)

**Additional Notes**
- Has runners or spreading rhizomes that root easily and fragments can be easily dispersed (3 pts.)
- Information unknown (U)

</tr>
</tbody>
</table>

### Step I: Establishment
- long juvenile period (>5 or more years for trees, 3 or more years for other growth forms) (0 pts.)
- short juvenile period (<5 years for trees, <3 years for other forms) (3 pts.)
- Information unknown (U)

### Step II: Ecological Importance

#### 11. Impact on Ecosystem Processes
- no known effect on ecosystem-level processes (0 pts.)
- moderate effects on ecosystem-level processes (e.g., changes in nutrient cycling) (3 pts.)
- causes long-term, substantial alterations in the ecosystem (e.g., changing fire regime of an area, changing hydrology of wetlands) (6 pts.)

#### 12. Impact on Rare Organisms
- no known negative impact on Ohio State-listed or federal-listed plants or animals (0 pts.)

### Score
- 0
- 3
- 0

### Notes
- 7,8: 8-10 years. 9: 7-10 years.
- 7: very rapid growth (over 2 m/year for seedlings). 8: "Princess tree seedling establishment may be infrequent and widely scattered." The species depends on high light conditions for germination and development. 10: Princess tree can be established as a timber tree in the South but it goes too fast for the wood to be valuable. 13: Fire promotes princess tree invasion. 16: "all tested components of fire, except elevated temperature, operate to stimulate germination of P. tomentosa seeds, suggesting that the post-fire invasive potential of this species can, at least in part, be explained at the germination level." 17: "Paulownia tomentosa seedlings can resprout at an early age, even in low light." 22: "although resprout ability is dependent upon belowground biomass, P. tomentosa seedlings can resprout at an early age, even in low light. This ability may allow the species to become established even in areas of high herbivore density." 23: "The clear cut habitat had the greatest human disturbance and was most favorable for growth and survival of the species. However, the edge habitat was also conducive to survival and growth in SE OH." 13: "Resprouting of clipped plants was more prevalent in artificial edge and full sun treatments".

**Step I**
- readily invades disturbed sites, persists and interferes with succession of native plants (4 pts.)

**Step II**
- found in 3 broad categories or 3 rare habitat types (4 pts.)

**Score**
- 36

**Outcome**
- Continue

**Step II Score**
- Pending Further Review

### Notes
- Considered a rare plant community in Ohio by ODW’s Biodiversity Database Program.
- Species very intolerant of shade and Ohio River Valley in OH.
- Naturalizes along highways and waterways and have persisted for at least twenty years” [in OH]; and “Volunteer plants have recently been found in intact secondary forest in southeastern Ohio on newly created tip up mounds (B. C. McCarthy, pers. obs.).”

### References
- 7,8,13,17,23

---

**18. Number of Habitats Invaded**

**Forestlands:** Floodplain forest, hemlock-hardwood forest, mixed mesophytic forest, beech-maple forest, oak-maple forest, oak-hickory forest.

**Species:** Bog, fen, twigrush-wiregrass wet prairie, marsh, buttonbush swamp, mixed shrub swamp, hemlock-hardwood swamp, maple-ash-oak swamp, white alder mounds, big bluestem prairie, little bluestem prairie (xeric Pinus-dominated forests).

**Notes:**
- xeric Pinus-dominated forests following fires; “Following its initial widespread establishment, P. tomentosa only persisted on xeric and exposed topographic positions that experienced high intensity burning”; "Like many early successional species, P. tomentosa is able to germinate and establish across a large range of post-disturbance environmental conditions. However, the persistent niche of disturbance specialists such as P. tomentosa is often limited by changing environmental conditions associated the post-disturbance recovery and expansion of native vegetation.”
- Volunteer plants have recently been found in intact secondary forest in southeastern Ohio on newly created tip up mounds (B. C. McCarthy, pers. obs.).

**8:** It is found if forest edges, and occasionally in the interior where there has been a light gap. 17: naturalizes along roadsides, forest edges, and disturbed conditions.

---

**Directions:** Place an “X” in the Score column next to the selected answer to each of the four questions.

- found in 4 or more rare habitat types (5 pts.)

1. In 1969, Lucy Braun noted that princess tree was abundant on some mesic slopes and in valley forests in the Appalachian Plateau and Ohio River Valley in OH. "Volunteer plants have recently been found in intact secondary forest in southeastern Ohio on newly created tip up mounds (B. C. McCarthy, pers. obs.)." This plant is a typical sun-adapted species that is a shade intolerant species, but "it shows an ability to acclimate to low light conditions." It will likely extend its range northward in OH with global warming; "often found on steep cobbley soils along highways and waterways".

Total Score:
Outcome: Pending Further Review
